

Math 250 MWF Applied Calculus

Text: *Applied Calculus*, 4th edition, Hughes-Hallet, Gleason, Lock, Flath, *et al.*, Wiley, 2010

Prerequisites: Math 100/105 or Math 140/143 with a grade of “C” or better. **A graphing calculator is required.**

Our textbook concentrates on the most important topics of calculus with emphasis on the graphical and numerical representation of functions and other relations as well as the traditional use of symbolic formulas. The materials in our text are meant to be read thoroughly and carefully. The writing is plain and straightforward. Please include reading tomorrow’s section in your assignment every day. The authors include several types of in-depth problems designed to develop conceptual understanding, rather than routine “drill” examples. The aim is to have you understand and apply the concepts, rather than mimic examples from the textbook. In this course, a graphing calculator is required for visualization and numerical computation.

Emergency Evacuation Procedure: A map of this floor is posted near the elevator marking the evacuation route and the **Designated Rescue Area**. This is an area where emergency service personnel will go first to look for individuals who need assistance in exiting the building. Students who may need assistance should identify themselves to the teaching faculty.
